

1. En la función1... Què fan aquestes línies de codi?

```

String string2 = "string2";

string2= string2.substring(0, string2.length()-1);
string2=string2+"1";

```

El substring devuelve una subcadena, la cual corresponde con el contenido entre los valores beginIndex y endIndex a definir en `string2 = string2.substring(0, string2.length()-1);`; esto lo que hace es que dentro de los paréntesis (0, `string2.length() - 1`) el 0 recoge la cadena ya definida de `String string2 = "string2";`

s	t	r	i	n	g	2
0	1	2	3	4	5	6
1	2	3	4	5	6	7

lo que hará es que en (0, `string2.length() - 1`) es que va a coger la posición 0 hasta `string2.length()` que es básicamente recoger todas las posiciones y como tiene -1 te borrará el 2 en este caso del `string2` y luego vas a concatenar `string2 = string2+"1";` que quedará como resultado `string1`.

2. Què valen les variables `string1` i `string2` abans d'executar el codi de comprovació següent?

```

if(string1 == string2 ) {
    System.out.println("SÓN IGUALS " + a );
}
else {
    System.out.println("SÓN DIFERENTS");
}

```

La primera variable vale "string1"; y la segunda variable vale "string2";

3. Per què no funciona l'operador == ? Quin operador s'ha d'usar en lloc d'aquest?

```
if(string1 == string2 )
```

Lo String no pueden compararse directamente con los operadores de comparación como en este caso son los operadores ==. Para ello se debe utilizar el .equals().

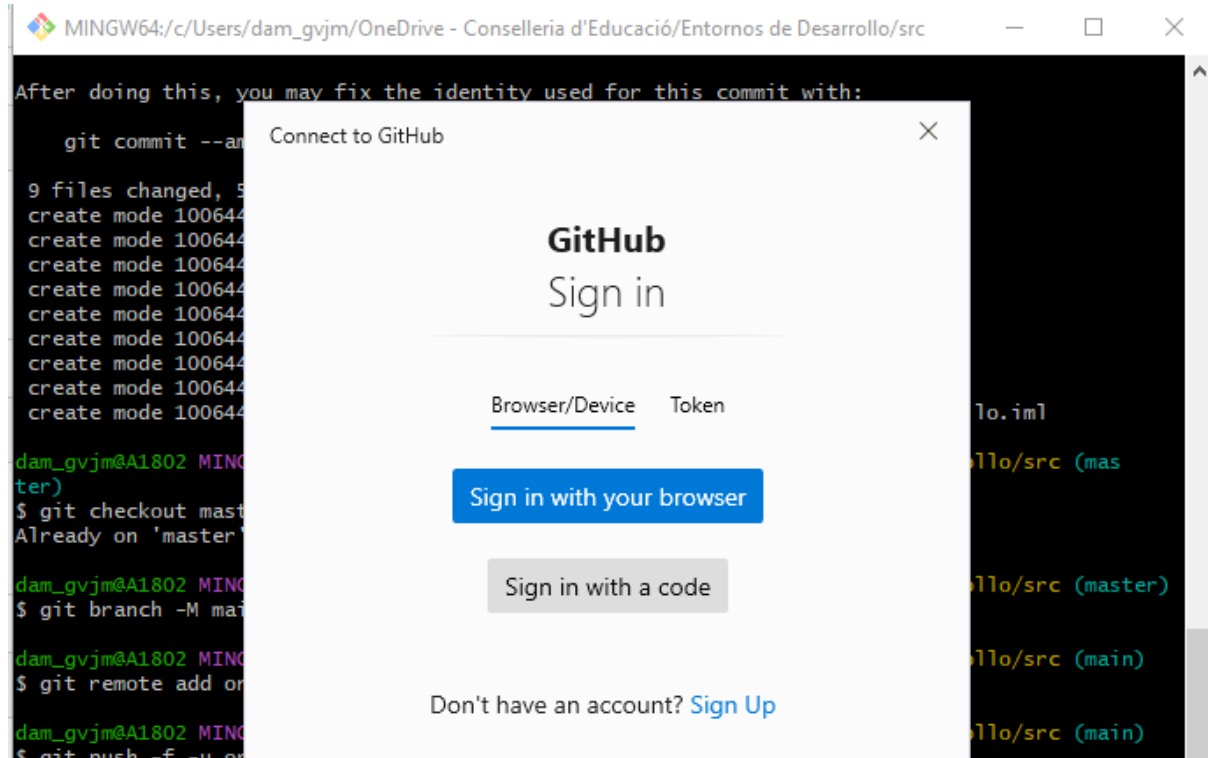

```
String values are compared using '==', not 'equals()'
Replace '==' with 'equals()' Alt+Mayús+Intro More actions... Alt+Intro
```

```
if(string1.equals(string2)) {
    System.out.println
}
else {
    System.out.println
```

Condition 'string1.equals(string2)' is always 'true'

Unwrap 'if' statement Alt+Mayús+Intro More actions... Alt+Intro

String string2 = "string2"

4. La función2() está declarada com segueix:

```

funcion1();

//Esta función no me va ... ¿ por que ?
// Tengo dos soluciones .. ¿como?
//funcion2();
}

```

```

public void funcion2() {

    System.out.println("-----");
    System.out.println("Esta es la función 2");
    System.out.println("Cómo hago la llamada para que funcione????");

}

```

Tengo que hacer la llamada de la función:

```

funcion2();

```

Non-static method 'funcion2()' cannot be referenced from a static context

Make 'ED\_Debug.funcion2' static Alt+Mayús+Intro More actions... Alt+Intro

ED\_Debug

```

public void funcion2()

```

Ahora debo colocar static en la función de funcion2 y listo, ya me funcionaría.

The screenshot shows a terminal window with the following commands and output:

```

$ git remote add origin https://github.com/JeanMichaelGranizo/Entornos-de-desarrollo.git

dam_gvjm@A1802 MINGW64 ~/OneDrive - Conselleria d'Educació/Entornos de Desarrollo/src
$ git push -f -u origin master
```

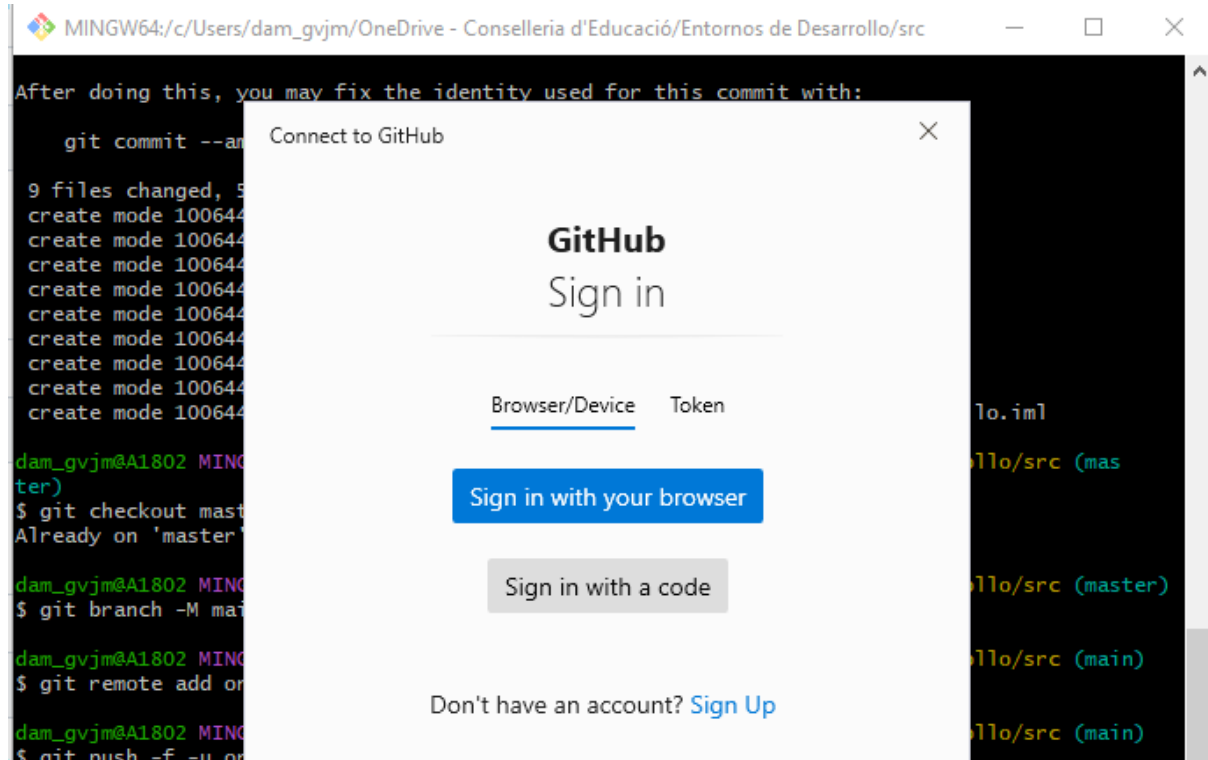

A GitHub sign-in dialog is overlaid on the terminal. It has the title "Connect to GitHub" and the GitHub logo. Below the logo is the text "Sign in". There are two tabs: "Browser/Device" (selected) and "Token". Under "Browser/Device", there is a blue button "Sign in with your browser" and a grey button "Sign in with a code". At the bottom, there is a link "Don't have an account? Sign Up".

```
public static void funcion2() {
    System.out.println("-----");
    System.out.println("Esta es la función 2");
    System.out.println("Cómo hago la llamada para que funcione????");
}
```

The output of the Java program is shown in a separate terminal window:

```
El valor de a es: 0
SON IGUALES 2
-----
Esta es la función 2
Cómo hago la llamada para que funcione????

Process finished with exit code 0
```

Punto de subirlo al Github.

```

The screenshot shows a Windows terminal window with the title bar "MINGW64: c:/Users/dam\_gvjm/OneDrive - Conselleria d'Educació/Entornos de Desarrollo/src". The terminal output shows a series of "create mode 100644" messages for various files. A "Connect to GitHub" dialog box is open in the foreground, displaying the GitHub "Sign in" screen with options for "Browser/Device" and "Token". The "Sign in with your browser" button is highlighted. Below the dialog, the terminal continues with commands like "git checkout master", "git branch -M main", "git remote add origin", and "git push -f -u origin master". It then shows the output of "git add ." and "git status", listing several new files to be committed, including ".idea/.gitignore", ".idea/misc.xml", ".idea/modules.xml", "Entornos de Desarrollo.iml", and files in the "out/production" directory.
